

StitchPad — Release Test Plan

Tester acceptance pass for the tester round (iOS TestFlight + Android closed test) before Play Store submission.

Release candidate: v1.2.0

Baseline (live): 1.1.0 / 1.1.1

Prepared: 2026-08-05

QA lead: Daniel

Platforms: Android + iOS

Report bugs to: tally.so/r/5BgVVb or getstitchpad@gmail.com

Scope — test only what is officially new in this release. This plan covers **only the features added since the last store release (1.1.0 / 1.1.1)**. Everything else (create/edit orders, customers, measurements, receipts, auth, billing) is unchanged and is covered by the light regression pass in \$5, not re-tested in full.

Officially added:

Staff roles · multi-user workshop

Founding Tailors leaderboard

To collect

In-app ratings

o Before you start

Item	Detail
Build under test	StitchPad v1.2.0 — iOS via TestFlight (external group), Android via the Play closed-test / alpha track. Confirm the version on Settings before testing.
Test accounts	Owner: Fola (demo owner account). Staff: Gabby (joins Fola's workshop). Staff flows need both accounts — one device signed in as the owner, one as the staff member.
Devices	At minimum one Android phone + one iPhone. For staff flows, two sign-ins running at once makes approve/leave easy to observe.
How to record	Tick the platform box you tested and mark P (pass) / F (fail) in Result. For any F , note the step number + a screenshot in the bug report.
Network tests	A few cases ask you to turn Wi-Fi/data off — use airplane mode, then restore.

1 Staff roles & multi-user workshop flagship

A workshop owner can invite teammates. Staff get a reduced, **money-free**, read-only work view — they see garments, statuses, dates, measurements and customer **names**, and can advance production, but never see prices, balances, payments, costs, profit, receipts, or customer contact. Test with owner = Fola, staff = Gabby.

1a Owner invites a teammate (Team screen)

ID	Test step	Expected result	And	iOS	Result
ST-01	As owner (Fola): Settings → Team .	Team row is visible for the owner only . Opens a seat card showing usage (dots) out of the seat cap.	☐	☐	
ST-02	Tap Invite a teammate .	Generates an invite code shown as XXXX-XXXX with a 7-day expiry, plus Copy code and Share link (WhatsApp).	☐	☐	
ST-03	Fill the workshop's seats, then reopen Team.	At the seat cap the Invite button is disabled and a seats-full state shows. (Server is the real gate — SEAT_CAP_REACHED .)	☐	☐	

1b Staff joins & waits for approval

ID	Test step	Expected result	And	iOS	Result
ST-04	As Gabby: tap the shared invite link (from WhatsApp) on the device.	App opens the Redeem invite screen with the code pre-filled (XXXX-XXXX).	☐	☐	
ST-05	Also test the manual path: on WorkshopSetup tap the "joining as staff?" fork and paste the code.	Same Redeem screen; invalid codes show an inline error, network errors show a snackbar .	☐	☐	
ST-06	Submit a valid code (Join).	Routes to the waiting for approval screen — animated hourglass, 3-step tracker, workshop identity chip.	☐	☐	

ST-07	Owner (Fola): Team → pending requests → Approve Gabby.	Gabby's waiting screen auto-advances to Home the moment approval lands (no manual refresh).	☐	☐	
ST-08	Repeat with Decline on a second pending request.	Declined staff returns to the Redeem screen with a message.	☐	☐	

1c Staff experience — money-free, read-only

ID	Test step	Expected result	And	iOS	Result
ST-09	As active staff (Gabby): look at the bottom navigation.	Three tabs only — Dashboard, Customers, Orders. No Reports tab.	☐	☐	
ST-10	Dashboard.	Work view: Overdue / Due-today / In-progress count tiles, a "Needs attention" advance queue, pipeline by stage. Header greets Gabby by name but shows Fola's workshop name . No # anywhere , no revenue, no goal, no speed-dial FAB . Empty state = "All caught up".	☐	☐	
ST-11	Open an Order as staff.	Garment, status, dates, measurements, customer name visible. Hidden: prices, balance, discounts, payments, costs, profit, share/receipt. Can advance production status ; no edit/create/delete; Ready/Delivered advances with no balance-owed warning .	☐	☐	
ST-12	Open a Customer as staff.	Name + their orders visible. No phone, no WhatsApp/call chips , no add-phone. No create FAB, no edit/duplicate/overflow.	☐	☐	
ST-13	Try to reach Reports via a deep link / restored screen.	Redirects staff back to the dashboard — Reports is unreachable for staff.	☐	☐	

1d Staff Settings — reduced surface & leave

ID	Test step	Expected result	And	iOS	Result
ST-14	Staff: Settings.	Hidden: Plan/subscription + Upgrade, Invite staff, Referral / "Invite & rewards", gift, business profile hero. Kept: profile, Appearance + notification toggles, account + Sign out, support, legal, delete account, community.	☐	☐	
ST-15	Staff: Settings → Preferences.	Shows only Appearance + notification toggles . Measurement units and Receipt image style are gone (owner-set), no dangling dividers.	☐	☐	
ST-16	Staff: tap Leave this workshop → confirm.	Confirmation dialog, then membership is cancelled and the user is signed out to the login screen (clean session, no stale staff access).	☐	☐	
ST-17	Owner: Team → active members → Revoke Gabby (confirm dialog).	Gabby is removed from the seat list; on Gabby's device the staff access ends.	☐	☐	

Owner sanity (ST-18): Throughout 1a–1d, confirm the **owner** (Fola) experience is unchanged — all four tabs incl. Reports, full money/contact everywhere, profile hero opens EditProfile with business + bank/payment fields, and a shared receipt/invoice carries **the owner's** business name, WhatsApp and bank details (never the staff member's). ☐ And ☐ iOS

2 Founding Tailors leaderboard new

A monthly member-get-member leaderboard for tailors. Each tailor gets a personal invite link; referrals that reach the "qualified" milestone earn tiered points; top 3 each month win a branded shirt. Test as an **owner** account (owner-gated surface).

ID	Test step	Expected result	And	iOS	Result
FT-01	Owner: open Founding Tailors (dashboard card, or Settings → Invite & rewards which now leads with Founding Tailors).	Screen loads with the tailor's own invite link and a Share (WhatsApp) action.	☐	☐	
FT-02	Look at the Your standing card.	Shows a This month row and an All time row. A rank chip appears only when rank > 0 . At 0/0 it shows the "Share your link to start earning" hint. Brief loading placeholder before it fills.	☐	☐	
FT-03	Read the How points work section (scroll).	Five bullets explaining tiered points (+1 activation, +1 per active day, capped), monthly counting, and that installs/signups alone do not count.	☐	☐	

FT-04	Tap Share .	WhatsApp share sheet opens with the invite link to <code>getstitchpad.com/founding-tailors?code=<code></code> .	☐	☐	
FT-05	View the leaderboard (top rankings).	Ranked list of top tailors; #1 rank reads as a tinted pill, distinct from the points figure.	☐	☐	
FT-06	Turn off network, then open Founding Tailors.	The Your standing card is simply absent — no error banner — and link / share / leaderboard still work.	☐	☐	

3 To collect new

A place to see who still owes money — Ready/Delivered orders with a balance remaining. Overdue = 7+ days. Includes an instant push when an order first becomes collectible. Test as an **owner**.

ID	Test step	Expected result	And	iOS	Result
TC-01	Owner dashboard: find the You're owed / Money to collect card. Tap it.	Card reflects Ready and Delivered unpaid orders and opens the To collect list.	☐	☐	
TC-02	In the list, use the sort menu and the filter chips .	Sort: oldest-owed (default), biggest-balance, newest, customer A–Z; overdue always on top . Chips filter by overdue / status / customer.	☐	☐	
TC-03	Tap Chase on a row.	WhatsApp opens with a balance-aware payment reminder signed with the workshop/business name. A customer with a blank/missing phone shows a snackbar instead of crashing.	☐	☐	
TC-04	Tap a row body.	Opens that order's detail (to record payment).	☐	☐	
TC-05	Have an overdue (7+ days) unpaid order.	Overdue collection is promoted into the dashboard focus hero ; the Money-to-collect card shows a periodic nudge animation.	☐	☐	
TC-06	Move an order to Ready/Delivered while it still has a balance (with push enabled for your tester account).	An instant push arrives once (not on every status change). Tapping it opens that order to record payment.	☐	☐	
TC-07	Tap the daily summary push (if received).	Opens the To collect list.	☐	☐	

Note: push notifications are tester-gated (staged rollout). If your account is not in the rollout, TC-06/TC-07 may not fire — mark N/A and note it.

4 In-app ratings new

Happy, engaged users are asked to rate at a delight moment (a recorded payment or an order marked Delivered). Happy → native store review; unhappy → feedback form. Use the **Debug menu** to force the prompt without waiting for the eligibility gate.

ID	Test step	Expected result	And	iOS	Result
RV-01	Debug menu → Force review prompt → choose Love it 🥰.	The native in-app review UI appears (Play in-app review on Android, StoreKit on iOS).	☐	☐	
RV-02	Force the prompt again → choose Not really 😐.	Opens the Tally feedback form in the browser (<code>tally.so/r/5BgVVb</code>).	☐	☐	
RV-03	Settings → Help & Support → Rate StitchPad .	Opens the app's store listing (write-review) on both platforms.	☐	☐	
RV-04	Debug → Reset review signals . On a fresh account, record a payment.	Prompt does not show yet (gate: needs ~3 days installed, opened on 2+ days, 3+ orders). After thresholds are met, one payment shows it once ; a second payment in the same session does not re-show.	☐	☐	
RV-05	Android release build only: smoke the Love-it path.	Play in-app review flow behaves (OS may throttle the actual card — confirm no crash / no burned state).	☐	—	

5 Regression sanity (unchanged areas)

Quick confidence check that the new work did not disturb the core owner flows. Not exhaustive — just confirm nothing obvious broke.

ID	Test step	Expected result	And	iOS	Result
----	-----------	-----------------	-----	-----	--------

RG-01	Sign in as owner; create a customer, an order with measurements, record a payment.	All core flows work as before; money shows normally for the owner.	☐	☐	
RG-02	Generate and share a receipt.	Receipt renders and shares with the owner's business identity + bank block.	☐	☐	
RG-03	Open Reports (owner).	Revenue analytics load as before.	☐	☐	
RG-04	General: light + dark mode across the new screens.	No clipped/unreadable UI in either theme.	☐	☐
